                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           USS-09-362-842-12

Sequence 12, Application US/09362842

Patent No. 6511824

Patent No. 6511824

GENERAL INFORMATION:

APPLICANT: Buchman et al.

TITLE OF INVENTION: NUCLEIC ACIDS AND POLYPEPTIDES OF INVERTEBRATE TWIK

TITLE OF INVENTION: CHANNELS AND METHODS OF USE

FILE REFERENCE: 7326-104

CURRENT APPLICATION NUMBER: US/09/362,842

CURRENT PILING DATE: 1999-07-28

FRIOR APPLICATION NUMBER: 09/270,767

WPI; 2000-549146/50. N-PSDB; AAD17497. Novel nucleic acid encoding a TREK-1 potassium channel protein for transfecting cells to be used to identify compounds with anesthetic properties.

Claim 9; Page 32-33; 39pp; English.

The invention relates to human and mouse TREK-1 potassium channel proteins and their corresponding DNA molecules. TREK-1 nucleic acid is useful for transfecting cells to induce expression of the TREK-1 potassium channel protein. These cells are then used in assays to identify compounds which have anaesthetic properties, producing a safe, reversible state of unconsciousness with concurrent amnesia and analgesia in a mammal upon inhalation. The present sequence is murine TREK-1 potassium channel protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polynucleotide AAZ0003, h-TREKI is a two pore potessium channel, and the gene maps to human chromosome 1q32, between the markers D1S237 and wis 15105. The polynucleotide sequence of h-TREKI can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's, stroke, and head trauma and neurological disorders including migraine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is human TREK1 (h-TREK1). h-TREK1 is a member of the 2P domain potassium channel family of proteins which play a part in the control of resting membrane potential. Modulation of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as epilepsy, sleep-related disorders, cognitive dysfunction, attention deficit disorder, addiction, anxiety/phobia, Parkinson's and Huntington's chorea, cerebral palsy, incontinence, erectile dysfunction or alopecia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                          The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polynucleotide and polypeptide of the invention demonstrate neuropyctective, noctropic, tranquiliser, antimigraine, neuroleptic, antimanic, antidepressant, anticonvulsant, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antiparkinsonian, cytostatic, cardiant, hypotensive, antianginal, antiparkinsonian antialcer and antiallergic properties. The nucleic acid molecule applyagatide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant G-protein coupled signalling, a disorder related to aberrant cell cycle regulation, neurological disorders, severe mental retardation and dyskinesias, brain disorders, spinal cord disorders, affective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GPCR; G-protein coupled receptor; neuroprotective; nootropic; tranquiliser; antimigraine; neuroleptic; antimanic; antidepressant; anticonvulsant; antiparkinsonian; cytostatic; cardiant; hypotensive; antianginal; analgesic; anorectic; anti-HIV; antiasthmatic; osteopathic; uropathic; antiulcer; antiallergic; cell cycle regulation; neurological; severe mental retardation; dyskinesia; brain; spinal cord; affective; neoplastic; cardiovascular; immunological; immune; endocrinal; growth; chromosome identification; metabolic; pituitary; chromis endocrinal; potassium channel subfamily K member 2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecule encoding a human G-protein coupled receptor, useful for diagnosing, preventing or treating diseases involving the receptor, e.g. Parkinson's disease, dementia, asthma, hypertension or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               disorders, immune-related disorders, endocrinal diseases, growth disorders, eating disorders, HIV infection, cancers, metabolic disorders and pitulitary disorders. Furthermore, the polymucleotide may be used in chromosome identification, in identifying organisms from minute biological samples, in gene therapy or as a molecular weight marker. The current sequence is that of a human GPCR (G-protein coupled receptor) protein of the invention which was used for homology purposes.

                                                                                                                  The present sequence is that of the human two pore domain K+ channel TREK -1. In rate, TREK-1 is highly expressed in much of the brain and is inhibited by protein kinase C and protein kinase C mediated by protein kinase C mediated by by cortain and on experimental results, it is hypothesized that TREK-1 is activated by volatile general anaesthetics and is expressed at high levels in the brain of sleep animals. Based on these expressed at high levels in the brain of sleep animals. Based on these key mediator of sleep (when open) and waking (when closed). The invention provides methods for identifying a sleep- or wakefulness-promoting compound based on the compound's ability to modulate two pore domain K+ channels such as TREK-1. It also provides screening methods for isolating short sleep, no rebound and sleep deprivation resistant Drosophila mutants useful for identifying sleep-related molecular targets.
               Identifying a Drosophila mutant fly with a no rebound, short sleep and/or no sleep deprivation resistant phenotype, for identifying sleep-related molecular targets, comprises recording sleep quantity of the mutant fly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

                                                                                                                                                                                                                                       The invention relates to human and mouse TREK-1 potassium channel proteins and their corresponding DNA molecules. TREK-1 nucleic acid is useful for transfecting cells to induce expression of the TREK-1 potassium channel protein. These cells are then used in assays to identify compounds which have anaestheir properties, producing a safe, reversible state of unconsciousness with concurrent ammesia and analgesia in a mammal upon inhalation. The present sequence is human TREK-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

Human GPCR twin pore channel" protein variant "Gene 9" protein.

(first entry)

29-JUL-2004

ADP03575

```
The invention relates to a novel isolated GPCR (G-protein coupled receptor) nucleic acid molecule. The polynucleotide and polypeptide of the invention demonstrate neuroprotective, nootropic, tranquiliser, antimigraine, neuroleptic, antimanic, antidepressant, anticonvulsant, antiparkinsonian, cytostatic, antimatic, antidepressant, anticonvulsant, antiparkinsonian, cytostatic, antiasthmatic, osteopathic, uropathic, analgesic, anorectic, anti-HIV, antiasthmatic, osteopathic, uropathic, antiparkinsonian, properties. The nucleic acid molecule and polypeptide of the invention may be useful in diagnosing, preventing, treating or ameliorating a medical condition, such as a disorder related to aberrant coll cycle regulation, neurological disorders, severe mental retardation and dyskinesias, brain disorders, spinal cord disorders, immunological disorders, indisorders, immunological disorders, endocrinal diseases, growth disorders, eating disorders, HIV infection, cancers, metabolic disorders and pituitary disorders. Furthermore, the polynucleotide may be used in chological samples, in gene therapy or as a molecular weight marker. The current sequence is that of a human GPCR (G-protein coupled receptor) protein which was isolated by the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SNOVSHWDLGSSFFFAGTVITTIGFGNISPRTEGGKIFCIIYALLGIPLFGFLLAGVGDQ 180

KKTKEEVGEFRAHAAEWTANVTAEFKETRRRLSVEIYDKFQRATSIKRKLSAELAGNHNQ 360
and moderately in testis, brain, colon and small intestine. The mammalian K+ channel protein is useful in methods for screening various compounds. In particular, the protein is useful in methods for identifying biologically active compounds with anaesthetic properties. The present sequence is TREK-1 protein used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                       Transmembrane potassium ion channel protein; inward potassium flux; pest control; membrane potential; pesticide; antihelminthic; nematode;

The protein produces currents whose current-voltage relationship is slightly inwardly rectifying in high symmetrical K+ conditions. TREK2 is a member of the fatty acid-activated and mechanosensitive K+ channel family. TREK-2 gene located on chromosome 14q31 is abundantly expressed in kidney, pancreas

                                                                                                                                                                                                                                 ö
                                          The invention relates to a mutant potassium ion channel protein, having four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve the membrane potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and annegonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                255
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 KKTKEEVGEFRAHAAEWTANVTAEFKETRRLSVEIYDKFORATSVKRKLSAELAGNHNO 360
                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a mutant potassium ion channel protein, having mutation at the second pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their accreageoning polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            135
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      256 TIYFVVITLTTIGFGDYVAGGSDIBYLDFYKPVVWFWILVGLAYFAAVLSMIGRLVRVIS

four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               four membrane spanning domains and two pore forming domains, comprising a mutation at the second pore forming domain. The expression of the mutant protein in a cell confers improved inward potassium flux and the ability to grow in the presence of potassium. Mutant proteins and their corresponding polynucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be used to develop agonists and antagonists of potassium channel proteins in order to control pests such as nematodes and insects. This sequence represents a human transmembrane potassium ion channel TPKCI mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180

The expression of the mutant protein in a cell confers improved inward potessium flux and the ability to grow in the presence of potassium. Mutant proteins and their poterosponding polymucleotide sequences can therefore be used to improve inward potassium flux into cells under acidic conditions by modulating the membrane potential using therapeutic agents. The sequences may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a mutant potassium ion channel protein, having
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Transmembrane potassium ion channel protein; inward potassium flux; pest control; membrane potential; pesticide; antihelminthic; nematode; insect; TPKC1; human; mutant; mutein.
